Dear: Mr. Konstantin Rupasov – director of 1C International Support Centre

1-V System JSC has successfully finished the first stage of 1cfresh cloud-based service deployment in Vietnam.

Established in 2006 in Hanoi, Vietnam, 1-V System is a developer and distributor of software solutions for business automation on 1C:Enterprise platform.

The company offers software solutions for a wide range of commercial and non-commercial organizations as well as personal use. The goal of our company is to help organizations to efficiently operate their accounting and management systems by using modern applications and advanced technologies.

Last year the company decided to extend the range of services by launching the cloud-based 1C solution called “1cfresh” to Vietnam market. The main objectives of the first stage of the project were:

- Check the market potential of the service
- Prepare the service to go live

The project was conducted under the technical supervision of 1C experts as a part of the Extended TechSupport service provided by 1C LLC.

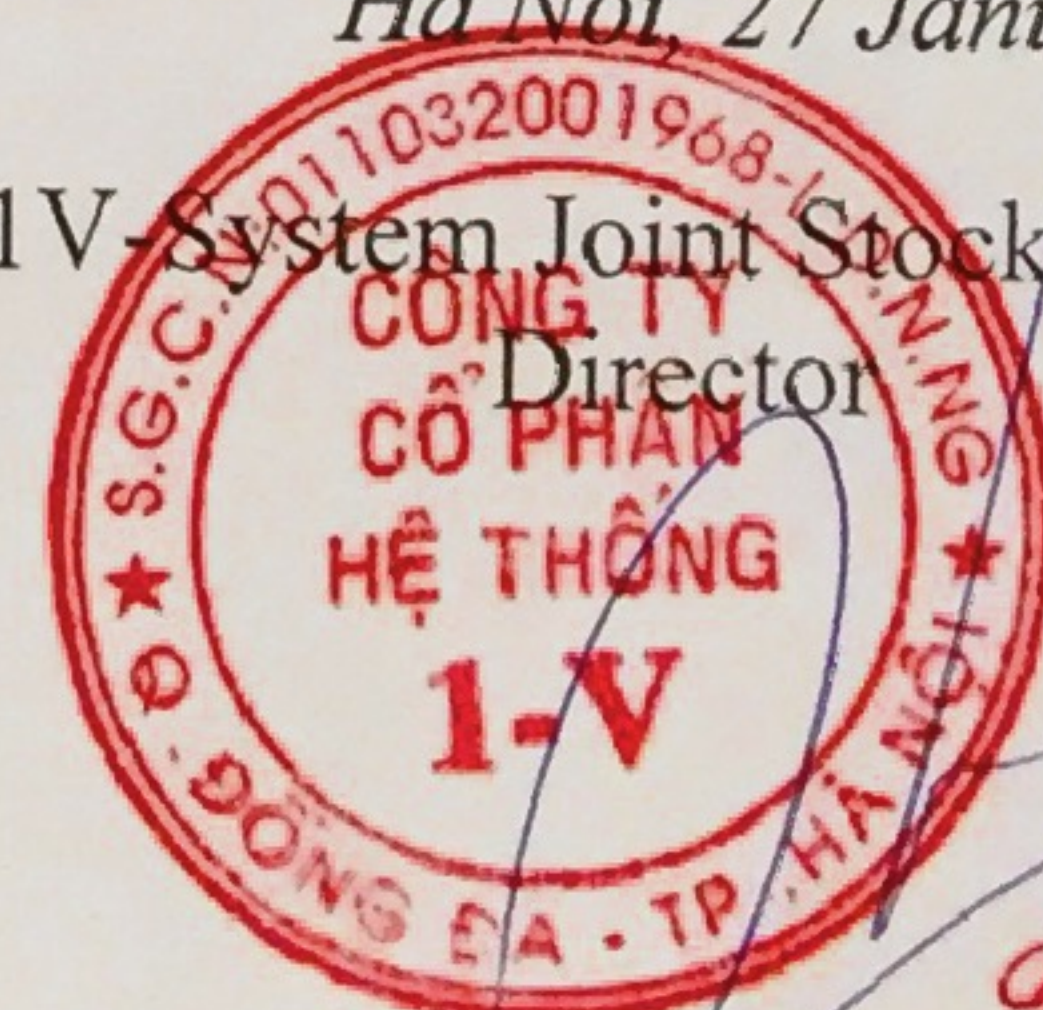

In the course of the project we localize 1cfresh site and applied solutions, chose the hardware, deployed the service, launch the most critical functional and made the service ready to go live. We also did some marketing research and saw the potential client’s interest and a positive impact on the company image as a top notch Vietnam IT services provider.

We want to express our appreciation to the Extended TechSupport team for providing prompt guidance and support during the first stage of the project and looking forward to working with the team in future.

Ha Noi, 27 January 2015

1V-System Joint Stock Company
